DISSERTATION

The Social Media Presidency: The New Media and Unilateral Information Dissemination

Two concurrent developments have taken place in American politics over the past decade: the development of social media and the growth of presidential power. This work asserts that emergent social media is offering the presidency the ability to bypass the press. In order to document this shift, this work examines the data from the current Obama administration to assess and examine how social media is changing executive governance and offering the presidency new press autonomy. Such an evolution can only serve to not only change the executive interaction with the press, but also with the populace at large.
